

**About us:**

Aurillion a technology company that is focused on improving health care needs through the provision of innovative technologies applied to workflow processes and the transfer and mobilization of information.

Aurillion implements industry leading solutions while applying best practices across the organization and has had a proven track record of success.

**Our Products:**

EfficientC : An *established* process management software application specifically attuned to the exacting needs of the total hospital supply chain. Aurillion has successfully deployed and supported hospital supply chain solutions within single site hospitals and multi- institutional regional organizations; working directly with the clients or through channel partners.

Waveforms: A cost-effective alternative to integration and interface strategies, Waveforms is a powerful *interoperability* platform that enables data exchange between multiple healthcare applications, while automating step-by-step patient care workflow. Waveforms has successfully automated complicated laboratory workflow and standardized patient registration processes.

PACE: Patient Automated Care Experience, powered by Waveforms, is designed specifically to provide an intuitive user interface for patients in assisting their care experience. PACE provides automated patient registration using a self-service kiosk
